Independent Research Project:
Workday 2
Part 1: Object Selection

1.) What object has your group picked to study?

2.) Show your TA your completed data product. Ensure you have a way to transfer this to yourself for incorporation into your experimental plan and final project presentations.

3.) Record any information about the observation you may need to incorporate into your experimental plan. Examples include (but are not limited to): date/time, exposure time, filters, pixel size, etc.
4.) Identify the calculation you intend to perform with your data product. Record the additional pieces of information or the resources you need (if any) to perform your calculation.

5.) List any resources, links, books, or articles you intend to use as possible sources for your final project papers/presentation.
